

DHEERAJ REDDY PANDHAM

Richmond, VA | 571-789-4964 | reddydheeraj94@gmail.com | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience building Go backend services, React interfaces, APIs, multitenant applications, and cloud data workflows. Hands-on experience with AWS, Kafka, data ingestion and egress, data-quality controls, automated testing, application security, CI/CD, and production support. Maintained 90%+ SonarQube test coverage and contributed to database optimizations that reduced website load times by 40%. AWS Certified Developer – Associate and AWS Certified Cloud Practitioner.

TECHNICAL SKILLS

Languages: Go (Golang), Java, Python, JavaScript, SQL, PL/SQL, HTML, CSS, JSON, XML
Backend: API Development, REST APIs, Gin, Echo, Gorilla Mux, GORM, Spring Boot, Spring MVC, Hibernate, Django, Node.js
Frontend: React, Next.js, Bootstrap, jQuery, Chart.js
Cloud and Data: AWS S3, ECS, EMR, Glue Jobs, Batch, RDS, Secrets Manager, Neptune, EC2, IAM, Fargate, Lambda, Step Functions, SQS, SNS, CloudWatch, Kafka, PostgreSQL, MySQL, MongoDB, Snowflake
DevOps, Testing, and Security: Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD, Testify, JUnit, Mockito, SonarQube, PagerDuty, Application Security, Vulnerability Remediation
Practices and Tools: Multitenancy, Data Ingestion, Data Egress, Data Quality, Stream Processing, Automated Testing, Git, GitHub, Jira, Maven, Postman, Agile, Scrum, Code Reviews, Production Support

PROFESSIONAL EXPERIENCE

- Capital One** Sep 2024 – Present
Software Engineer Richmond, VA
 - Develop Go backend services and APIs supporting dataset ingestion, egress, and data-quality workflows.
 - Build multitenant application capabilities through coordinated changes to Go backend services and React frontend components.
 - Develop Kafka stream-processing workflows for datasets and improve data quality across ingestion and egress jobs.
 - Build automated tests for backend services, APIs, and data-processing workflows while maintaining 90%+ SonarQube coverage.
 - Maintain Amazon Neptune graph data by identifying and deleting stale vertices to improve data quality.
 - Implement cloud data and batch workflows using Amazon S3, ECS, EMR, Glue Jobs, AWS Batch, RDS, Secrets Manager, Neptune, and CloudWatch.
 - Orchestrate RDS and S3 batch-ingestion workflows and use Go data-streaming logic to transfer data to OneStream.
 - Build event-driven processing with AWS Step Functions and Lambda; improve SQS error handling through individual message processing and dead-letter queues.
 - Identify and remediate application security vulnerabilities to harden internally developed applications and reduce attack exposure.
 - Use Docker for service simulation; maintain Jenkins CI/CD pipelines, analyze CloudWatch logs, monitor PagerDuty alerts, review code, and provide production support.
- ADT** Dec 2023 – Sep 2024
Software Engineer Remote
 - Developed and maintained scalable Go backend systems supporting residential home-security applications.
 - Implemented serverless backend workflows using AWS Lambda and Step Functions to automate application processing.
 - Developed backend data-access logic with PostgreSQL and optimized database operations to improve query performance and application responsiveness.
 - Deployed backend workloads using AWS EC2, S3, and RDS to support cloud-based application processing and data storage.
 - Applied AWS IAM roles and policies to strengthen access control and support secure resource management.
 - Enhanced CI/CD pipelines with GitHub Actions to automate builds and support consistent deployments.
 - Used Amazon CloudWatch and SNS for application monitoring, alerting, troubleshooting, and production reliability.
 - Collaborated in an Agile Scrum team using Jira for sprint planning, task tracking, and delivery.
- Rakuten India** Dec 2021 – Jul 2022
Software Engineer Bangalore, India
 - Collaborated with backend engineers to design scalable, secure Java solutions using the Spring Framework.
 - Optimized SQL and MongoDB operations using JavaScript and SQL, reducing website load times by 40% and improving data retrieval.
 - Developed responsive React and CSS components for a ticketing system to improve usability and interface performance.
 - Improved Jenkins and GitHub Actions CI/CD pipelines to streamline deployments and reduce manual intervention.

PROJECTS

- TradeSense** | *Python, Streamlit, Pandas, scikit-learn* [Live Demo](#)
 - Built a risk-first algorithmic trading and market-prediction system using Python, Streamlit, Pandas, and scikit-learn.
 - Implemented backtesting against real and synthetic datasets to evaluate trading and market-prediction strategies.
- Hirewave** | *JavaScript, PostgreSQL* [Live Demo](#)
 - Built a JavaScript and PostgreSQL job-automation platform designed to streamline job-search and application workflows.
 - Developed a workflow-focused application that organizes and simplifies activities across the job-application process.
- CKart** | *Django, Next.js, PostgreSQL, Docker, Kubernetes, Jenkins* [Live Demo](#)
 - Developed an e-commerce platform for construction supplies that enables users to browse, filter, and purchase region-specific products.

- Implemented user authentication, address and payment management, inventory tracking, order processing, district-based dynamic pricing, and promotional discounts.
 - Used Django, Next.js, PostgreSQL, Docker, Kubernetes, and Jenkins to support containerized deployment and CI/CD workflows.
- Monstograin** | *Python, React, Node.js, Chart.js* Patent No. 202041049928A
- Developed an IoT-based system that monitors environmental conditions, including temperature and humidity, inside food-grain storage facilities.
 - Used sensor data and machine-learning techniques to detect anomalies and help prevent grain spoilage.
 - Built React and Chart.js dashboards to visualize storage-condition data and provide operational insights.
 - Patent: MONSTOGRain, India Patent No. 202041049928A, published Nov 16, 2020.
- Financial Market Data Analysis** | *Python, Pandas, NumPy, SciPy, Matplotlib*
- Designed data-driven models to analyze historical stock-market trends and evaluate investment strategies.
 - Collected and processed financial data from the Yahoo Finance API using Python, Pandas, and NumPy.
 - Performed time-series forecasting, statistical testing, and correlation analysis using SciPy and related statistical tools.
 - Visualized market trends and portfolio performance with Matplotlib and Seaborn to compare return and risk characteristics.

EDUCATION

University of Central Missouri	Dec 2023
<i>Master of Science in Computer Science – GPA: 3.75/4.00</i>	<i>Missouri, KS</i>
Vidya Jyothi Institute of Technology	Apr 2022
<i>Bachelor of Technology in Computer Science – GPA: 3.82/4.00</i>	<i>Hyderabad, India</i>

CERTIFICATIONS

AWS Certified Developer – Associate | AWS Certified Cloud Practitioner | Front-End Web Development with React | Programming Essentials in Python | Cisco Programming Essentials in C
